About

Software Developer with **1.5 years** experience building scalable Backend applications. Currently at **Delhivery**, focusing on architecting complex, config-driven workflows and monitoring systems. Expert in **Java, Spring Boot, Kafka, and Redis** with a focus on code quality.

Education

The LNM Institute Of Information And Technology

Jaipur

Bachelors of Technology in Computer Science And Engineering

2020 – 2024

- **Selected Coursework:** Data Structures And Algorithms, Operating Systems, DBMS, Computer Networks

Experience

Delhivery Ltd.

Gurugram, Haryana

Software Developer

05/2025 – Present

- **Tech:** Java, Spring Boot, Python, Flask, Kafka, Redis
- Designed and developed a **fleet monitoring system** to detect SLA breaches in real time and trigger automated **voice-call workflows** for driver outreach.
- Leveraged **LLM-based NLP** to convert unstructured call transcripts into structured delay reasons, enabling proactive decision-making and reducing manual follow-ups.
- Built scalable, asynchronous pipelines using **Kafka** for event processing and integrated backend services for load-level insights.
- Optimized config-driven workflows using Redis caching, reducing system latency by **35%** via automated cache invalidation and real-time refreshes.
- Re-architected bulk order uploads, improving throughput by **15%** and reducing latency by **20%** using optimized **Kafka partitioning**.

BluSmart

Gurugram, Haryana

Software Developer Engineer Intern

12/2024 – 04/2025

- **Tech:** Java, Spring Boot, SQL, MongoDB, Redis
- Optimized critical stats API using Redis caching, cutting response time from **7s** to under **50ms**.
- Achieved a **6x** performance improvement in bulk ride cancellation, reducing execution time from **24s** to **4s**.
- Developed real-time dashboards and implemented API pre-computation with **Kafka**, reducing latency from **10s** to under **50ms**.
- Maintained high code quality using **design patterns** to ensure system scalability and manageability.

Software Developer Engineer Intern

06/2024 – 12/2024

- Developed self-service ride creation, increasing driver income by **100%** and reducing dispatch workload.
- Created bulk-refund feature with **Redis-based locking** for transactional integrity in distributed systems.
- Implemented Breakdown Management, reducing resolution time by **90%** and fraud by **30%**.

Personal Projects

Client Management Application — 🐙

Dec 2022

- Built RESTful APIs using Spring Boot and SQL for CRUD operations; implemented secure user authentication.

Technical Skills

Languages: C++, Java, Python, SQL

Technologies: Spring Boot, Microservices, REST API, Kafka, Redis, NoSQL, AWS

Tools: VS Code, IntelliJ IDEA, Eclipse IDE
